

# **GEO-CACHING MISSION: TEAM 1**

Now you have some handy technology, you need to go out and find more clues and more provisions to help you to survive. You must navigate to your 3 designated drop-points to retrieve 3 caches. These hold important components for your survival, as well as clues to help you find your way to the Survival Depot.

When you find a cache, mark its location on this map, using one of the stickers from the cache. Make sure you mark it accurately. Save the other stickers - you'll need them later. Grab everything, including the container - it might come in handy!

## Hints:

- Every team has different objectives - don't follow another team, it won't help!
- Work together - everyone needs to survive! Leave no team-mate behind! Make sure you take turns in using the equipment you have.
- Verify your location on the 2 tricorders. You may need to experiment by moving with one of them and seeing what it does to the co-ordinates on the GPS in order to figure out which direction to go.
- If you come across another cache that is not at one of your locations, then unless there are instructions in the cache to collect it, leave it alone, another team may be looking for it.
- Don't rely on seeing a cache and running to it - you need to verify your locations - sign off below to confirm you checked you were in the right place.
- Once you have found all three caches, rendezvous with the other survivors in the middle of the main oval.
- Be aware of your surroundings - keep an eye out for snakes and any other dangers. Remember, you've survived the apocalypse so far by being clever and careful - don't take unnecessary risks now!
